LUKS dm-crypt/Device encryption GUIDE

Article Number: 296 | Rating: Unrated | Last Updated: Fri, Jul 13, 2018 10:45 AM LUKS dm-crypt/Device encryption GUIDE

This section covers how to manually utilize *dm-crypt* from the command line to encrypt a system.

Contents

- 1 Preparation
- 2 Cryptsetup usage
 - 2.1 Cryptsetup passphrases and keys
- 3 Encryption options with dm-crypt
 - 3.1 Encryption options for LUKS mode
 - 3.2 Encryption options for plain mode
- 4 Encrypting devices with cryptsetup
 - 4.1 Encrypting devices with LUKS mode
 - 4.1.1 Formatting LUKS partitions
 - 4.1.1.1 Using LUKS to format partitions with a keyfile
 - 4.1.2 Unlocking/Mapping LUKS partitions with the device mapper
 - 4.2 Encrypting devices with plain mode
- 5 Cryptsetup actions specific for LUKS
 - 5.1 Key management
 - 5.1.1 Adding LUKS keys
 - 5.1.2 Removing LUKS keys
 - 5.2 Backup and restore
 - 5.2.1 Backup using cryptsetup

- 5.2.2 Restore using cryptsetup
- 5.2.3 Manual backup and restore
- 5.3 Re-encrypting devices
 - 5.3.1 Encrypt an unencrypted filesystem
 - 5.3.2 Re-encrypting an existing LUKS partition
- 6 Resizing encrypted devices
 - 6.1 Loopback filesystem
- 7 Keyfiles
 - 7.1 Types of keyfiles
 - 7.1.1 passphrase
 - 7.1.2 randomtext
 - 7.1.3 binary
 - 7.2 Creating a keyfile with random characters
 - 7.2.1 Storing the keyfile on a filesystem
 - 7.2.1.1 Securely overwriting stored keyfiles
 - 7.2.2 Storing the keyfile in ramfs
 - 7.3 Configuring LUKS to make use of the keyfile
 - 7.4 Manually unlocking a partition using a keyfile
 - 7.5 Unlocking a secondary partition at boot
 - 7.6 Unlocking the root partition at boot
 - 7.6.1 With a keyfile stored on an external media
 - 7.6.1.1 Configuring mkinitcpio
 - 7.6.1.2 Configuring the kernel parameters
 - 7.6.2 With a keyfile embedded in the initramfs
