

Netcat shell zabezpieczony hasłem

Article Number: 45 | Rating: Unrated | Last Updated: Thu, May 24, 2018 9:16 PM

Prosty skrypt autorstwa **Vittorio Milazzo** ukazujący sposób przyznania powłoki za pomocą netcat dopiero po podaniu hasła:

```
1          #!/bin/bash
2
3          ncpasswd () {
4
5              NC="/bin/netcat"
6
7              PORT="999"
8
9              PASSWORD="123456"
10
11             SHELL="/bin/bash"
12
13
14             echo -n "Enter password: "
15
16             stty -echo
17
18             read mypass
19
20             stty echo
21
22             if [ ${mypass} = $PASSWORD ]
```

```
15         then
16             echo "Access granted...start netcat shell on port
$PORT"
17
18             while true; do $NC -l -p $PORT -e $SHELL;
done
19
20             else
21                 echo "Incorrect Password"
22             fi
23
24             }
25
26             ncpassword
27
28             sh $0
```
