

AIX, System Admin↑ The

chrctcp command

Article Number: 578 | Rating: Unrated | Last Updated: Fri, Apr 19, 2019 3:01 PM

The chrctcp command is not documented in AIX, but you can still use it to do nice things, especially when you are scripting. Some examples are:

To enable xntpd in /etc/rc.tcpip, and to start xntpd:

```
# chrctcp -S -a xntpd
```

To disable xntpd in /etc/rc.tcpip, and to stop xntpd:

```
# chrctcp -S -d xntpd
```

To enable xntpd in /etc/rc.tcpip, but not start xntpd:

```
# chrctcp -a xntpd
```

To disable xntpd in /etc/rc.tcpip, but to not stop xntpd:

```
# chrctcp -d xntpd
```

So, instead of manually editing /etc/rc.tcpip, you can use chrctcp to enable (uncomment), disable (comment) some services, and start and stop them in a single command.
