Applescript: Run or Call a Shell Script

last updated January 15, 2017 in Categories [Mac OS X](#), [Programming](#), [UNIX](#)

How do run a shell script with an AppleScript? How do I integrate shell scripts into AppleScript? How do I call a shell script called /path/to/chkhost.sh using an applescript?

AppleScript is a scripting for Mac OS. It is the Mac OS scripting interface, which is meant to operate in parallel with the graphical user interface. With AppleScript, you can control, and communicate among, applications, databases, networks, Web services, and even the operating system itself.

Running Shell Commands From AppleScript Scripts

You can easily execute shell commands from your AppleScript using the following syntax:
